

## Y4 Science: Earth and Space

### Lesson 3

Watch this video about '[The Phases of the Moon](#)', then draw what the Moon looks like as it orbits (moves around) the Earth.

#### Phases of the Moon

What does the Moon look like at each phase? Shade in each Moon on the diagram to correspond with what it would look like from the Earth. The Sun is at the top of the picture; would we be able to see the Moon if it is blocking the Sun? Use this as your starting point and watch the video again to help you.
